

Question 1:

out[31] will be A[31]

out is A shifted right by one bit and the MSB filled by the out[31].

b.

Active low

tristate buffer: when shared[3] = 1,
shared = 1'b2.

c.

A	Y[7] Y[0]
000	00000001
001	00000010
010	00000100
011	00001000
100	00010000
101	00100000
110	01000000
111	10000000

3 into 8
decoder

(d)

```

always @(*)
begin
  case x({A,B,C})
    3'b1xx : H = F & G;
    3'b01x : H = F | G;
    3'b001 : H = F ^ G;
    default : H = D & E;
  endcase
end

```

2.

```

reg [7:0] A;
reg parity;
always @(*)
begin
    parity = 1'b1;
    for (int i=0; i<=7; i++)
        if (A[i]==1) parity = ~parity; // can also be
                                         parity = parity ^ A[i];
    end

```

3.
